

Description

NutriMeter

BACKGROUND OF INVENTION

[0001] The NutriMeter was invented in 2002 by Dorinda K. Pittman to revolutionize the health conscience world. The application is far from complete, but with additional funds and technology assistance, the NutriMeter will be in every home.

SUMMARY OF INVENTION

[0002] The NutriMeter will allow users to track their daily, weekly, monthly, or annually intake of nutrients based on their weight, sex, and health status (i.e. diabetic, pregnant, etc.). The NutriMeter will calculate the current nutrients a person intakes, and inform them of deficient areas.

DETAILED DESCRIPTION

[0003] The NutriMeter is a Visual Basic Program that will (with upgrades) accept uploads from Palm PC's and downloads from food preparation companies. The system will also (with upgrades) scan a Nutritional Chart into it's database.
